

# The Medical Surge Tier System and Healthcare Coalitions: Coordination and Collaboration

A Presentation to the Wisconsin Public Health Association

J. Marc Liu, MD, MPH

Michael Clark, MD

Medical Advisors,

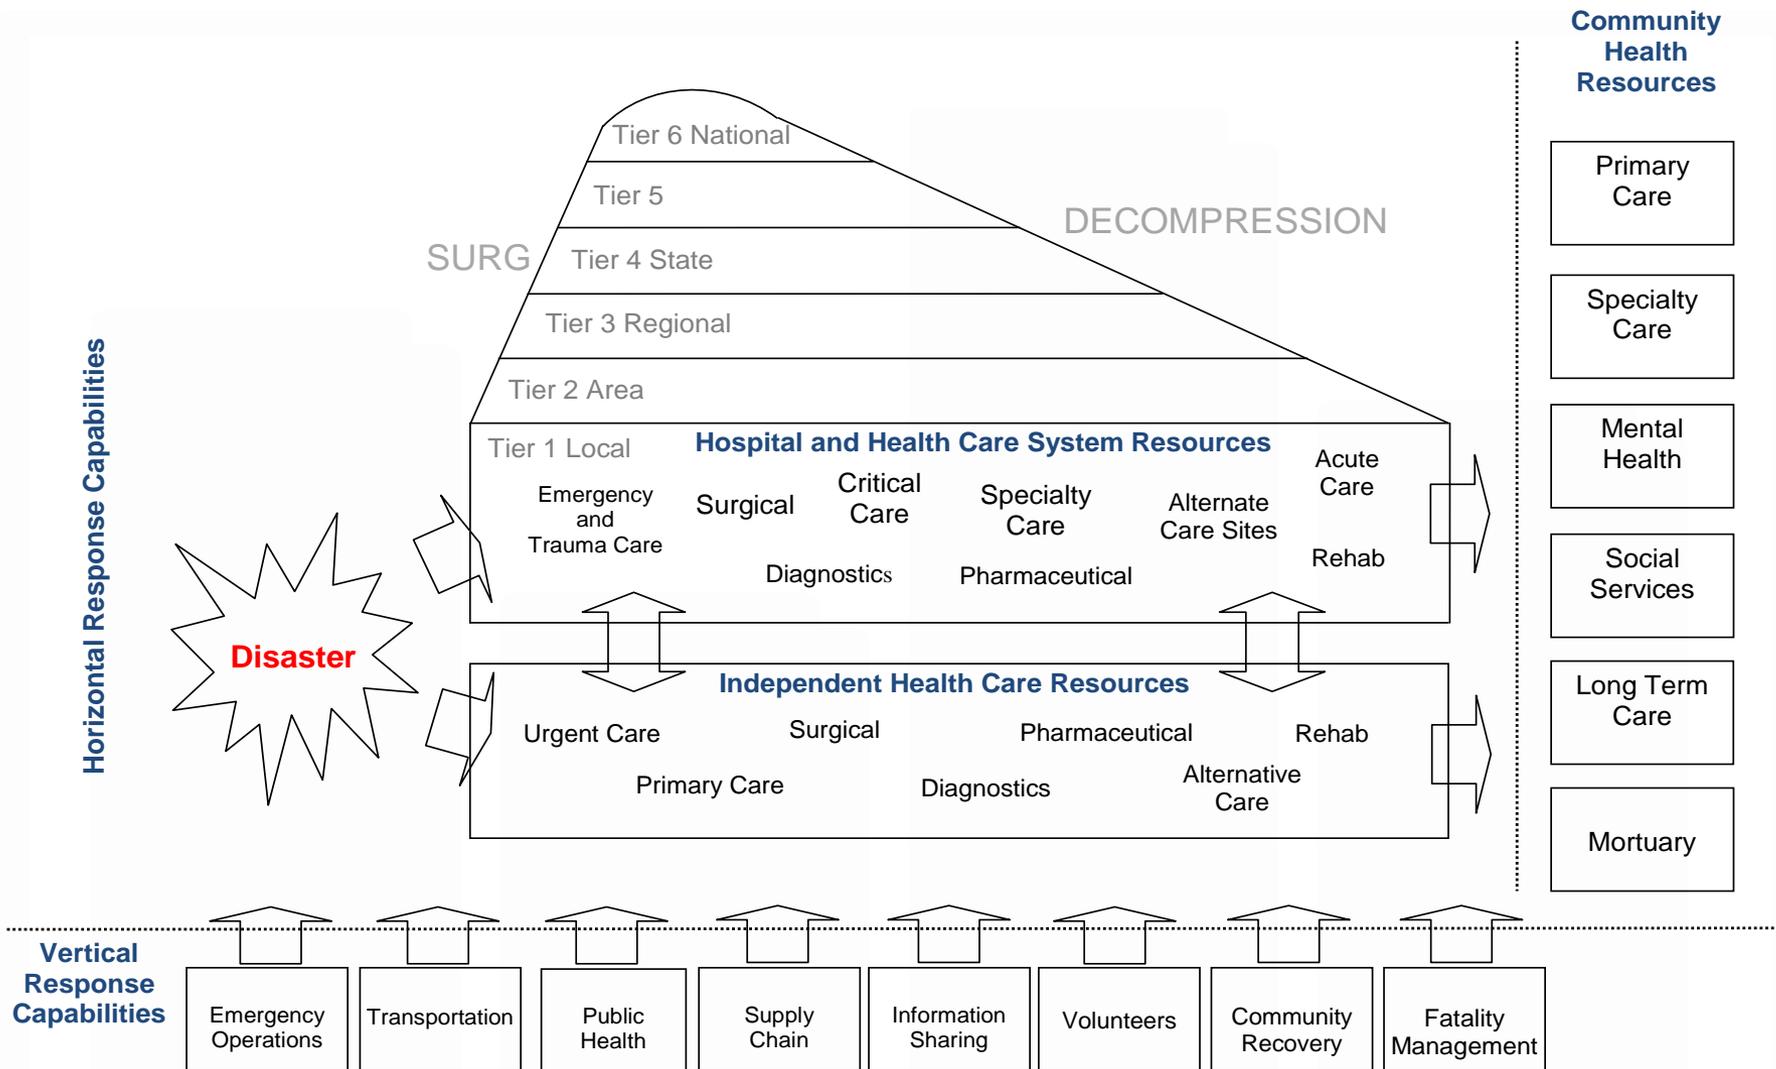

Wisconsin Healthcare Emergency Preparedness Program (WHEPP)

May 2015

# Previous Discussions – The Need

- **Coordination for large-scale incidents**
  - If a local healthcare organization does not have space or resources to manage a surge of patients, where does it turn?
  - Where can patients be moved?
  - How will patient movement or transfer be coordinated?
- **Assistant Secretary for Preparedness and Response (ASPR) guidance**
  - Specific patient capacity targets
  - Surgical capacity
  - Development of multi-disciplinary, multi-agency health care coalitions
  - Development of coordination systems/structures

# DISASTER HEALTHCARE RESPONSE – A COALITION MODEL

# The Process

- **Medical Surge Capacity Workgroup**
  - Workgroup of WHEPP
  - Multi-disciplinary representation
  - Multi-regional representation
  - Reports to WHEPP
- **Development process**
  - Workgroup discussion over two years to form draft
  - Distribution of draft tiers through WHEPP for feedback
  - Incorporation of feedback and finalization of tier structure
  - Development of resource document
  - Presentation and roll-out of final tiers and resource document

# The WHEPP Coordination Tiers

- General framework for coordination
- 6 Tiers –
  - Tier 1 – Local Health Care Organization (Health Care Asset Management)
  - Tier 2 – Area (Coalition) Coordination
  - Tier 3 – Regional (Jurisdictional) Coordination
  - Tier 4 – Intrastate (Inter-jurisdictional) Coordination
  - Tier 5 – Interstate Regional Coordination
  - Tier 6 - Federal Support to Response

# Principles of the Tier Coordination Structure

- Meets HHS/ASPR recommendations
  - Compatible with HHS tier structure
  - Promotes multi-disciplinary, multi-organizational coalition approach
  
- Provides framework for coordination
  - Adds structure to communication pathways
  - Standardizes the process

# Principles of the Tier Coordination Structure

- Modular, bottom-up approach
  - Consistent with Incident Command System principles
  - Locally driven - each tier decides when to activate the next level
  - Area or Regional Medical Coordinating Centers only assume coordination function when tier below requests it (or if tier below is obviously incapacitated)
- Allows for flexibility while maintaining a standardized process
  - Each region tailors its coalition and internal area boundaries as needed
  - Adaptable to unique hazards faced in an area/region
  - Coalitions set their own triggers for activation

# Principles of the Tier Coordination Structure

- Communication and coordination is the most important aspect of planning, mitigation, response, and recovery.
  - Healthcare coalitions will strive to maintain links within the coalition and with other organizations/agencies in order to allow for information flow and coordination throughout the community
  - During an incident, regular communication between the incident scene and the healthcare organization or coalition is critical for successful incident management.
  - The purpose of the Wisconsin healthcare coalition tiered response framework is to promote structured communication and coordination.

# Definitions

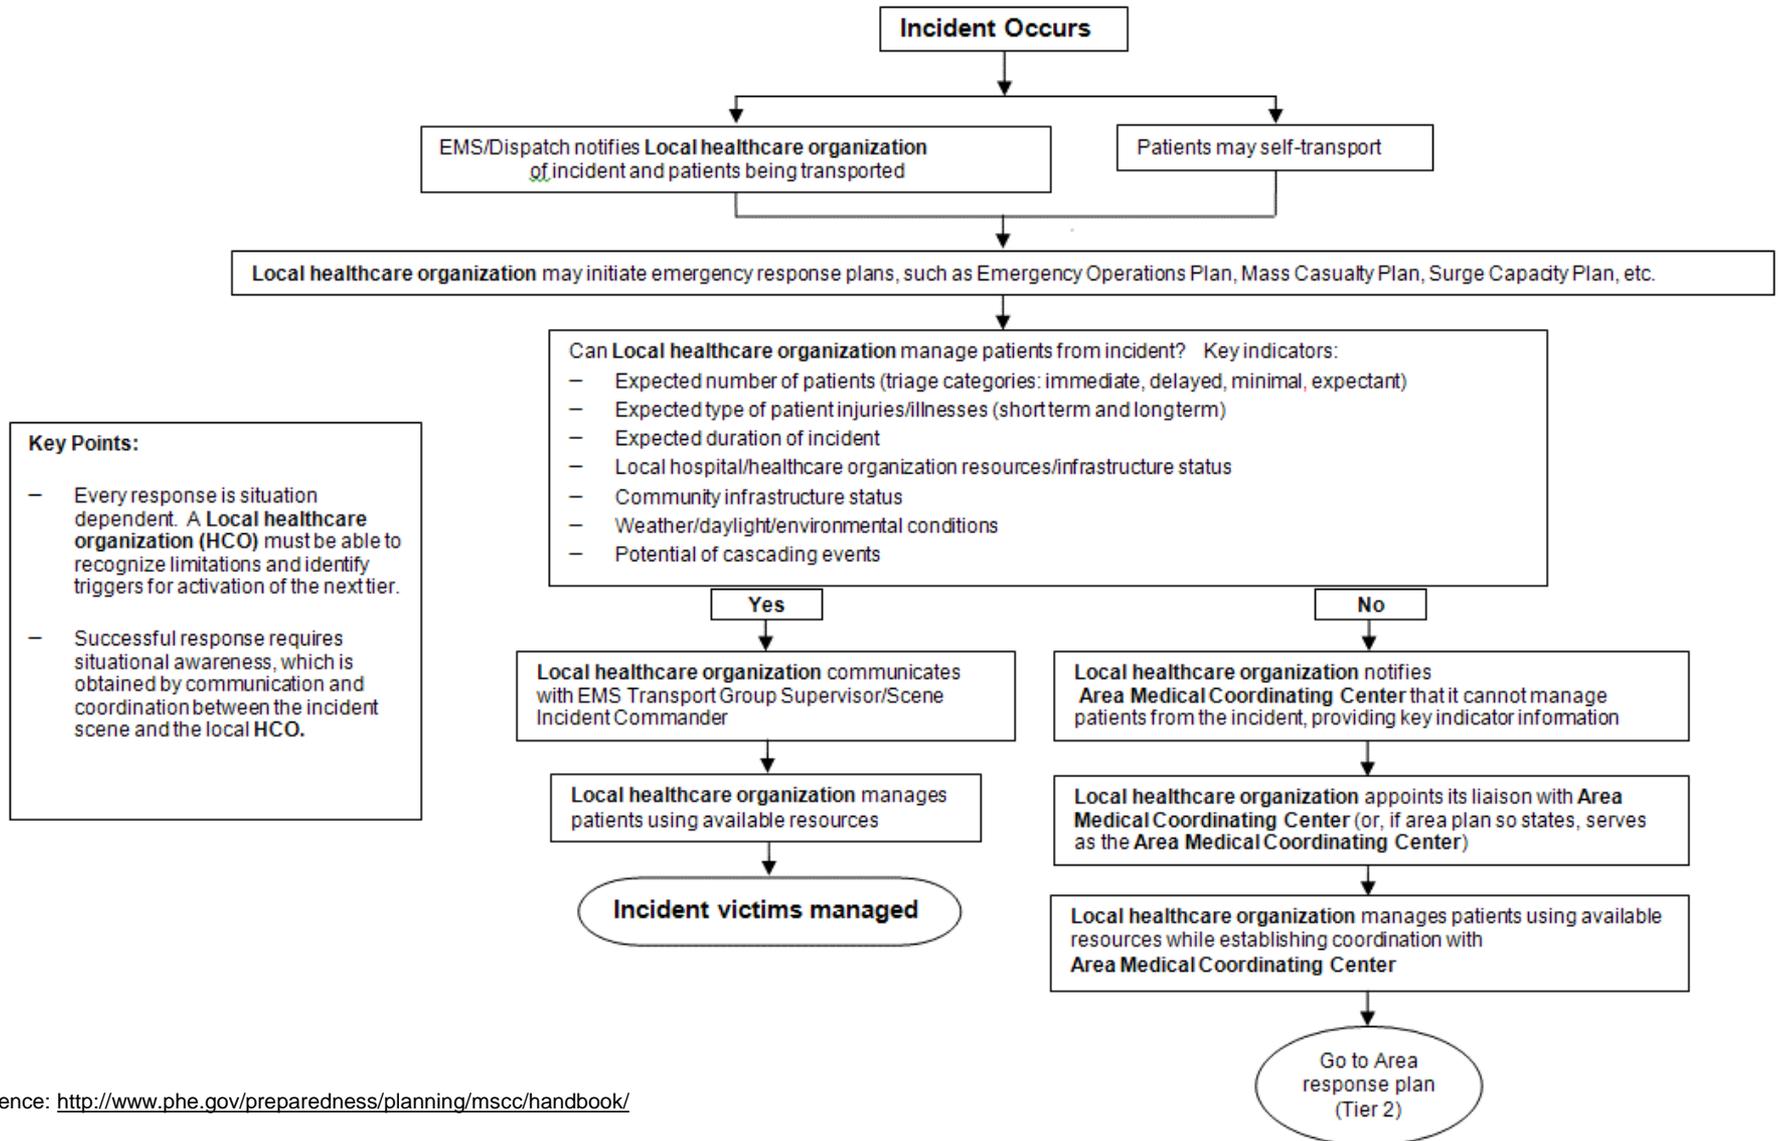

- **Local healthcare organization (HCO, or “healthcare organization”, “healthcare entity”)**: A single entity providing medical services, this may include (but is not limited to) a hospital, integrated healthcare system, emergency medical services (EMS) agency, physician office, outpatient clinic, nursing home or other skilled nursing facility.
- **Healthcare coalition (HCC, or “coalition”)**: A multi-disciplinary, multi-organization partnership that organizes individual healthcare assets/organizations into a single functional unit in order to maximize cooperative planning, information sharing, and management coordination.
  - Include hospitals, public health agencies, EMS, emergency management, long-term care or alternative treatment facilities, dialysis and other outpatient treatment centers, nursing homes and other skilled nursing facilities, private physician offices, clinics, community health centers and any other healthcare asset.
  - May also include emergency response and public safety agencies, community and volunteer organizations, educational institutions, and any other organization that may provide resources to care for patients during an event.

- **Health Emergency Region** (or “region”): A geographic region with borders defined by the Wisconsin Department of Health Services for the purposes of medical planning and response coordination in large-scale emergencies.
- **Area Medical Coordinating Center (AMCC)** – A healthcare or healthcare-related entity (such as public safety answering or dispatch center, transfer/access center, etc.) in the geographic area of an incident, with the ability to support the healthcare coalition with coordination of information and patient movement.
  - Designated through planned criteria or schedule.
  - Depending on the area and situation, an AMCC may be the initial healthcare organization impacted by an incident and/or may also be the Regional Medical Coordinating
  - For example, the closest trauma center to a mass casualty incident may serve as the AMCC.
- **Regional Medical Coordinating Center (RMCC)**: A designated healthcare or healthcare- related entity (public safety answering or dispatch center, transfer/access center, etc.) serving a Health Emergency Region, with the pre-determined ability to support the healthcare coalition with coordination of information and patient movement along with planning activities.
  - The RMCC can be seen as the coordinating center for a region’s healthcare coalition.

# Tier 1 - Medical Management of Incident by Local Health Care Organization

REV 5.13.2014

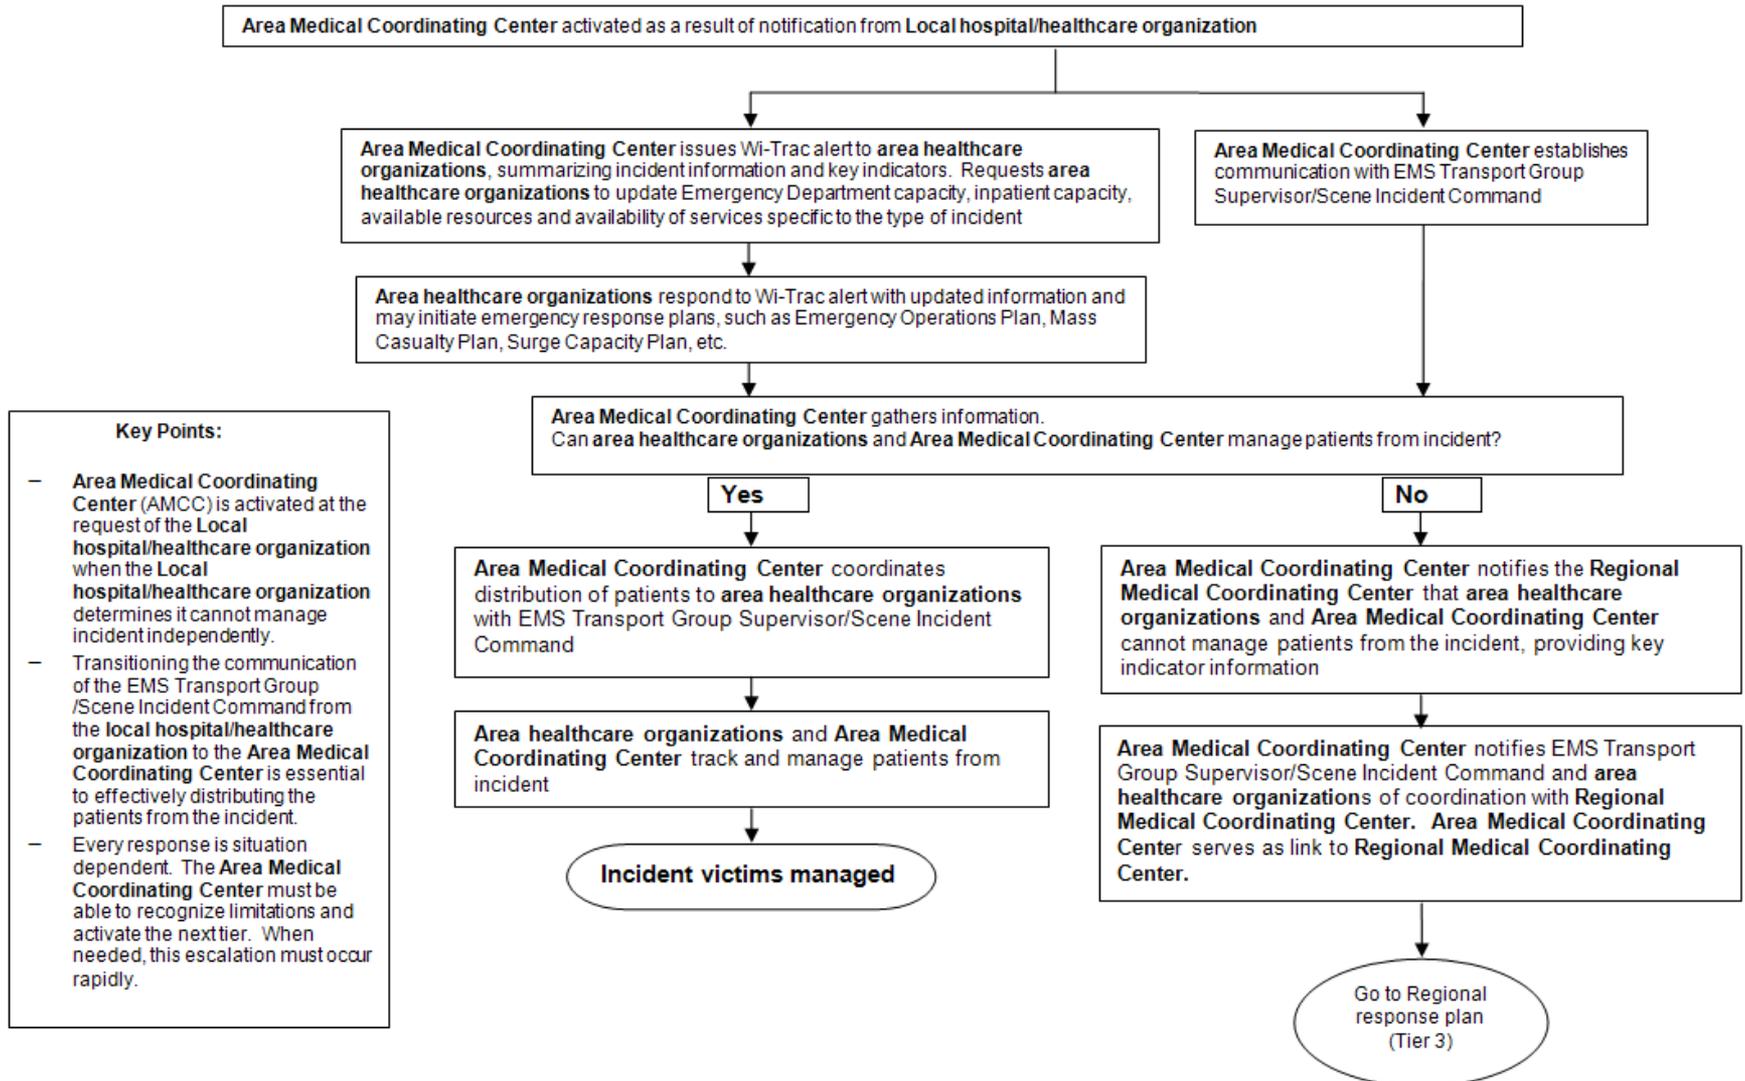

## Wisconsin Healthcare Emergency Preparedness Program (WHEPP) Healthcare Coalition Tiers Medical Management of Incident by local Healthcare Organization (DHHS Tier 1 Response) - Decision Tree

# Tier 2 - Medical Management of Incident by Area Health Care Organization

REV 5.13.2014

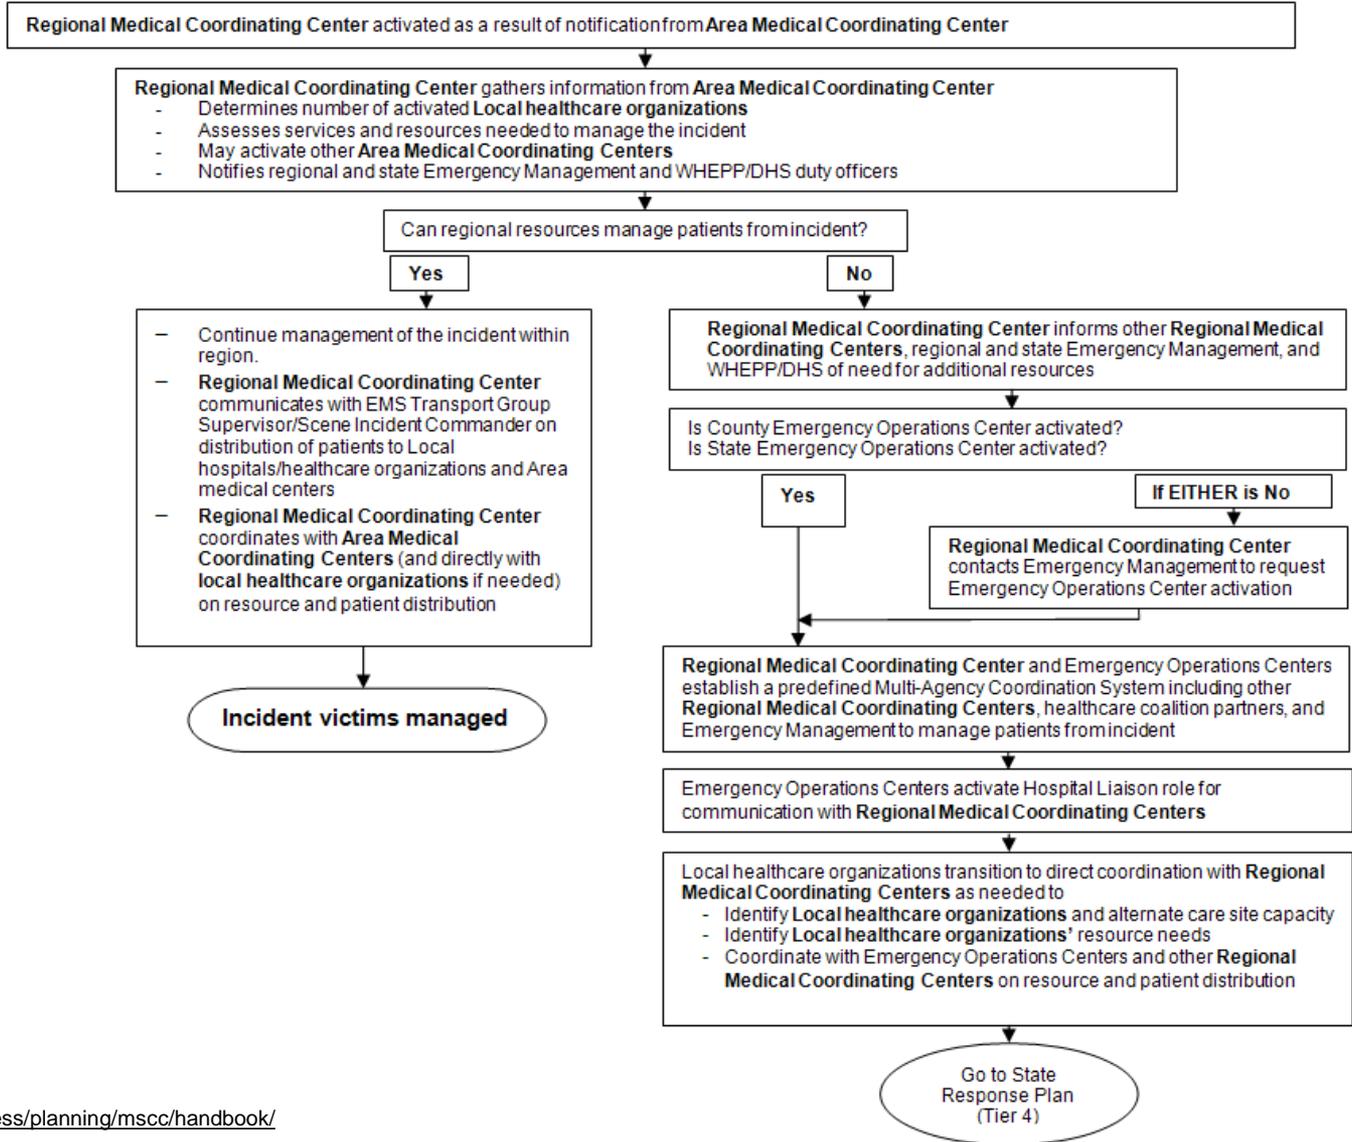

## Wisconsin Healthcare Emergency Preparedness Program (WHEPP) Healthcare Coalition Tiers Medical Management of Incident by area Healthcare Coalition (DHHS Tier 2 Response) - Decision Tree

# Tier 3 – Regional / Jurisdictional Incident Management

REV 5.13.2014

## Wisconsin Healthcare Emergency Preparedness Program (WHEPP) Healthcare Coalition Tiers Regional / Jurisdictional Incident Management (Tier 3 Response) – Decision Tree

- Key Points:**
- **Regional Medical Coordinating Center** is activated at the request of the **Area Coordinating Medical Center** when the area determines it is unable to manage incident independently.
  - An incident of regional scale should trigger notification of other **Regional Medical Coordinating Centers** and state Emergency Management.
  - Communication between the **Regional Medical Coordinating Center** and **Area Medical Coordinating Centers** is essential to transitioning the patient distribution function of managing the incident.
  - **Area Medical Coordinating Centers** will communicate with EMS Transport Group Supervisor/Scene Incident Commander and all local hospital/healthcare organizations of the **Regional Medical Coordinating Center's** assumption of patient coordination duties.
  - Every response is situation dependent. The **Regional Medical Coordinating Center** must be able to recognize limitations and activate the next tier. When needed, this escalation may occur rapidly.

# Tier 4- State Response and Coordination of Intrastate Jurisdictions

REV 5.13.2014

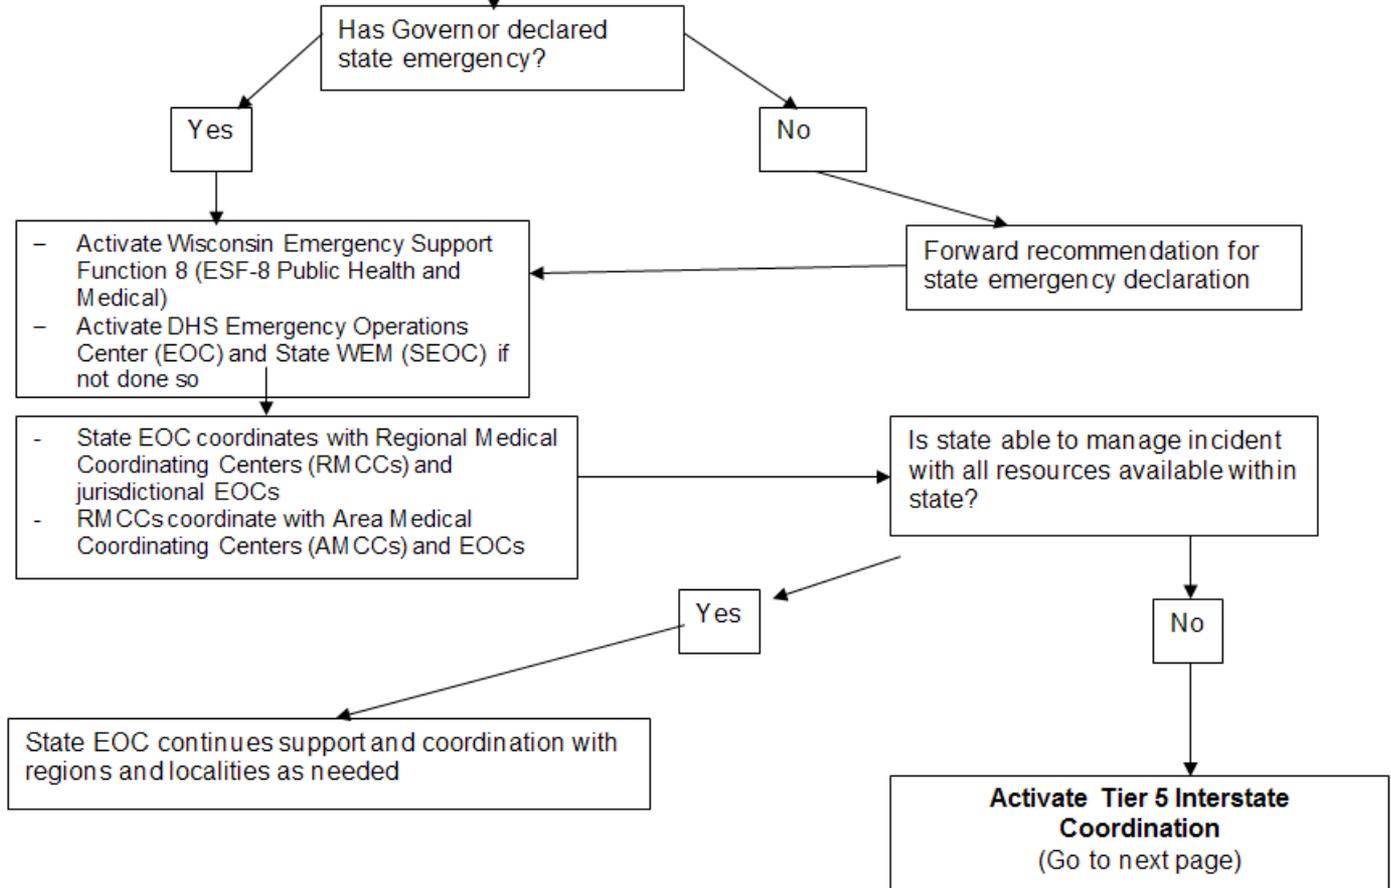

## Wisconsin Regional Healthcare Coalitions

### State Response and Coordination of Intrastate Jurisdictions (Tier 4 Response) - Decision Tree

Notification from **Regional Medical Coordinating Centers (RMCCs)** to **WI Dept. of Health Services (DHS)** or **Emergency Management (WEM)** occurs

#### Key points:

- Systematic coordination and delivery of state assets will support local and jurisdictional/ regional responses.
- Communication is essential for managing response.
- State will monitor situation and will activate Tier 5 (interstate response) when state resources are inadequate.

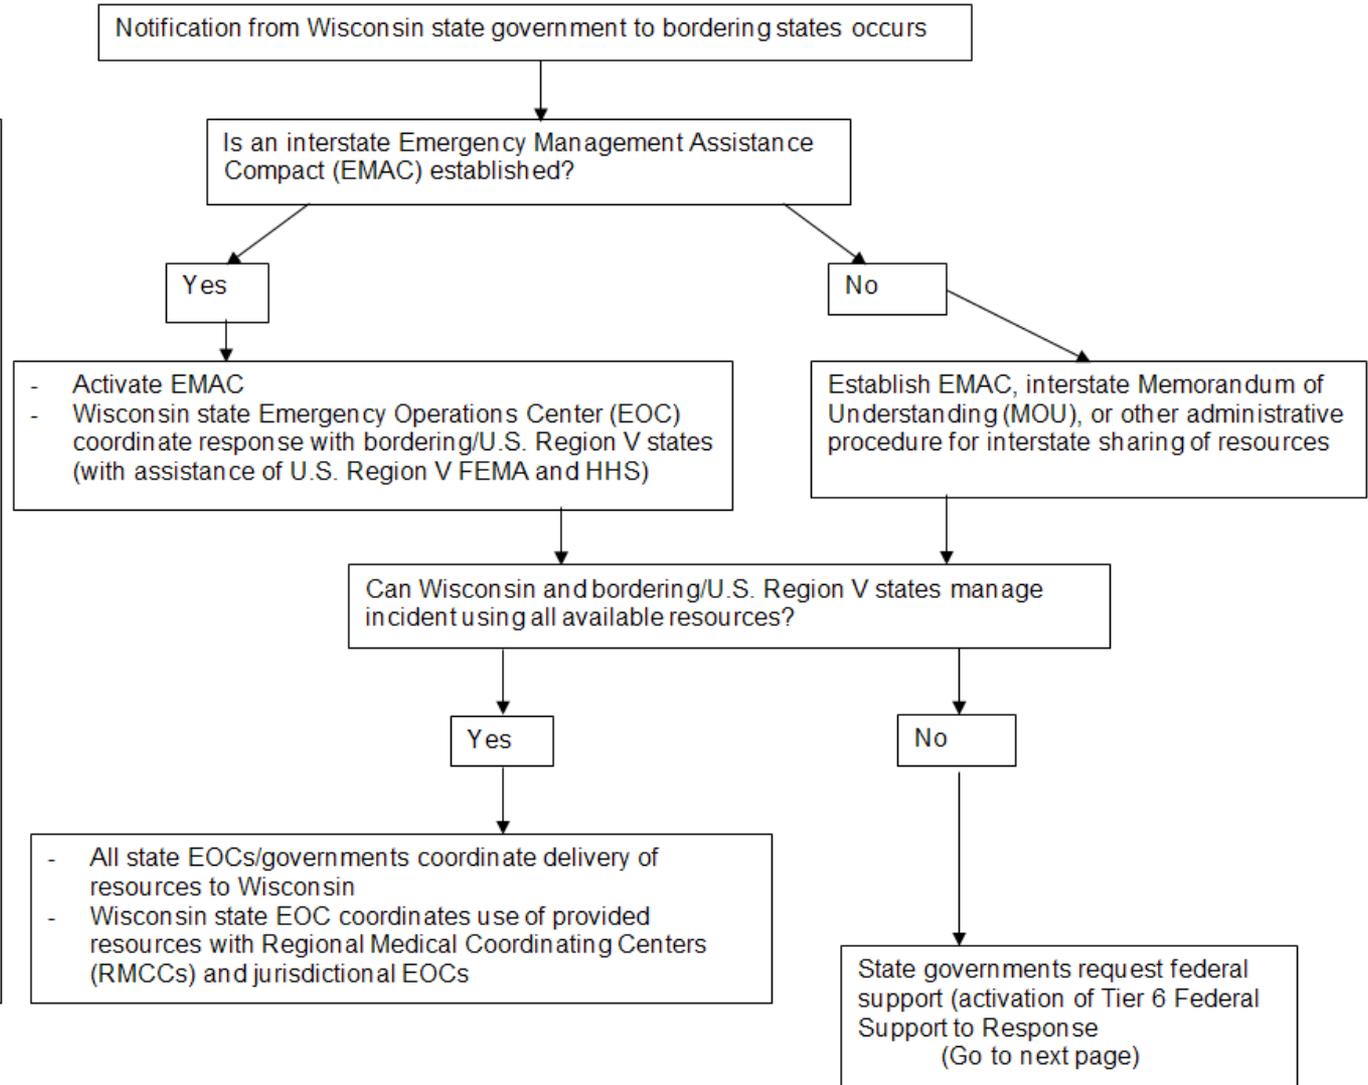

# Tier 5- Interstate Regional Management Coordination

REV 5.13.2014

## Wisconsin Regional Healthcare Coalitions Interstate Regional Management Coordination (Tier 5 Response) - Decision Tree

**Key Points:**

- Incident Command System (ICS)/National Incident Management System (NIMS) principles will be used
- Communication and coordination between and within states is essential.
- Pre-defined legal agreements and administrative procedures (e.g. EMACs, MOUs) will speed response and coordination during an incident.
- The assistance of the U.S. Region V offices of the Dept. of Health and Human Services (HHS) or Federal Emergency Management Agency (FEMA) may be needed for coordination

REV 2.2.2014 - DRAFT

## Wisconsin Regional Healthcare Coalitions Federal Support to Response (Tier 6 Response) - Decision Tree

### Key Points:

- Incident Command System (ICS), National Incident Management System (NIMS), and National Response Framework (NRF) principles and process will be used.
- Federal assistance requires the approval of a request from a state governor.
- State governments are responsible for coordinating the use/delivery of provided federal support with federal authorities.
- The U.S. Dept. of Health and Human Services (HHS) will deploy an Incident Response Coordination Team (IRCT) to coordinate all deployed ESF-8 (Public

Federal government receives request for federal assistance from state governor(s)

Federal assets under National Response Framework Emergency Support Function 8 (ESF-8 Public Health and Medical) are activated if the following occur:

- Presidentially declared disaster or emergency
- Declaration of incident of national significance by U.S. Dept. of Homeland Security
- Request from another federal agency

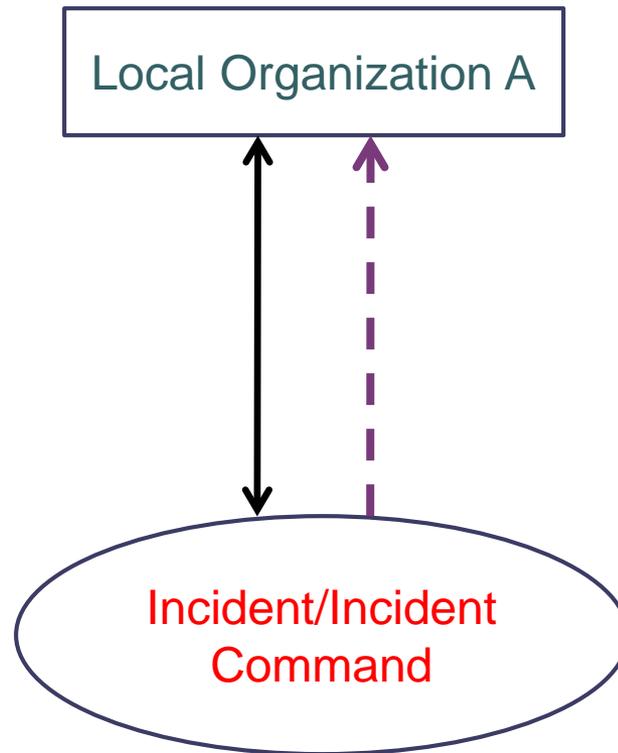

U.S. Dept. of Health and Human Services (HHS) Secretary's Operations Center (SOC) is activated to coordinate ESF-8 Public Health and Medical response to support tiers 1 through 6

HHS SOC coordinates with HHS Regional Response Coordination Centers (RRCCs), U.S. Dept. of Homeland Security's National Response Coordination Center (NRCC), and state governments to manage response

# Clarifications between AMCC and RMCC:

- Both centers serve to coordinate information and patient movement, but on different scales and usually at different points in a response operation.
- Both are pre-determined centers.
- Multiple AMCCs will be present within a Health Emergency Region.
  - The number, location, and area covered by an AMCC will vary, depending on groupings of hospital and/or locations of potential hazards (airports, festival grounds, etc).
- Each Health Emergency Region will have a one RMCC.
- AMCC's role is to coordinate smaller surge events able to be handled primarily by a few hospitals located in same local geographic area
  - For example, a bus or multi-vehicle crash), as well as provide coordination of the initial triage and transport for larger scale surge events (such as a plane crash, building explosion, etc.).
- RMCCs role is coordination of larger scale surge events requiring the resources of the entire region (multiple areas); especially coordination of secondary triage and transfer to tertiary care centers.
- RMCC also has a lead role in the medical planning and response to large-scale hazards within a region.

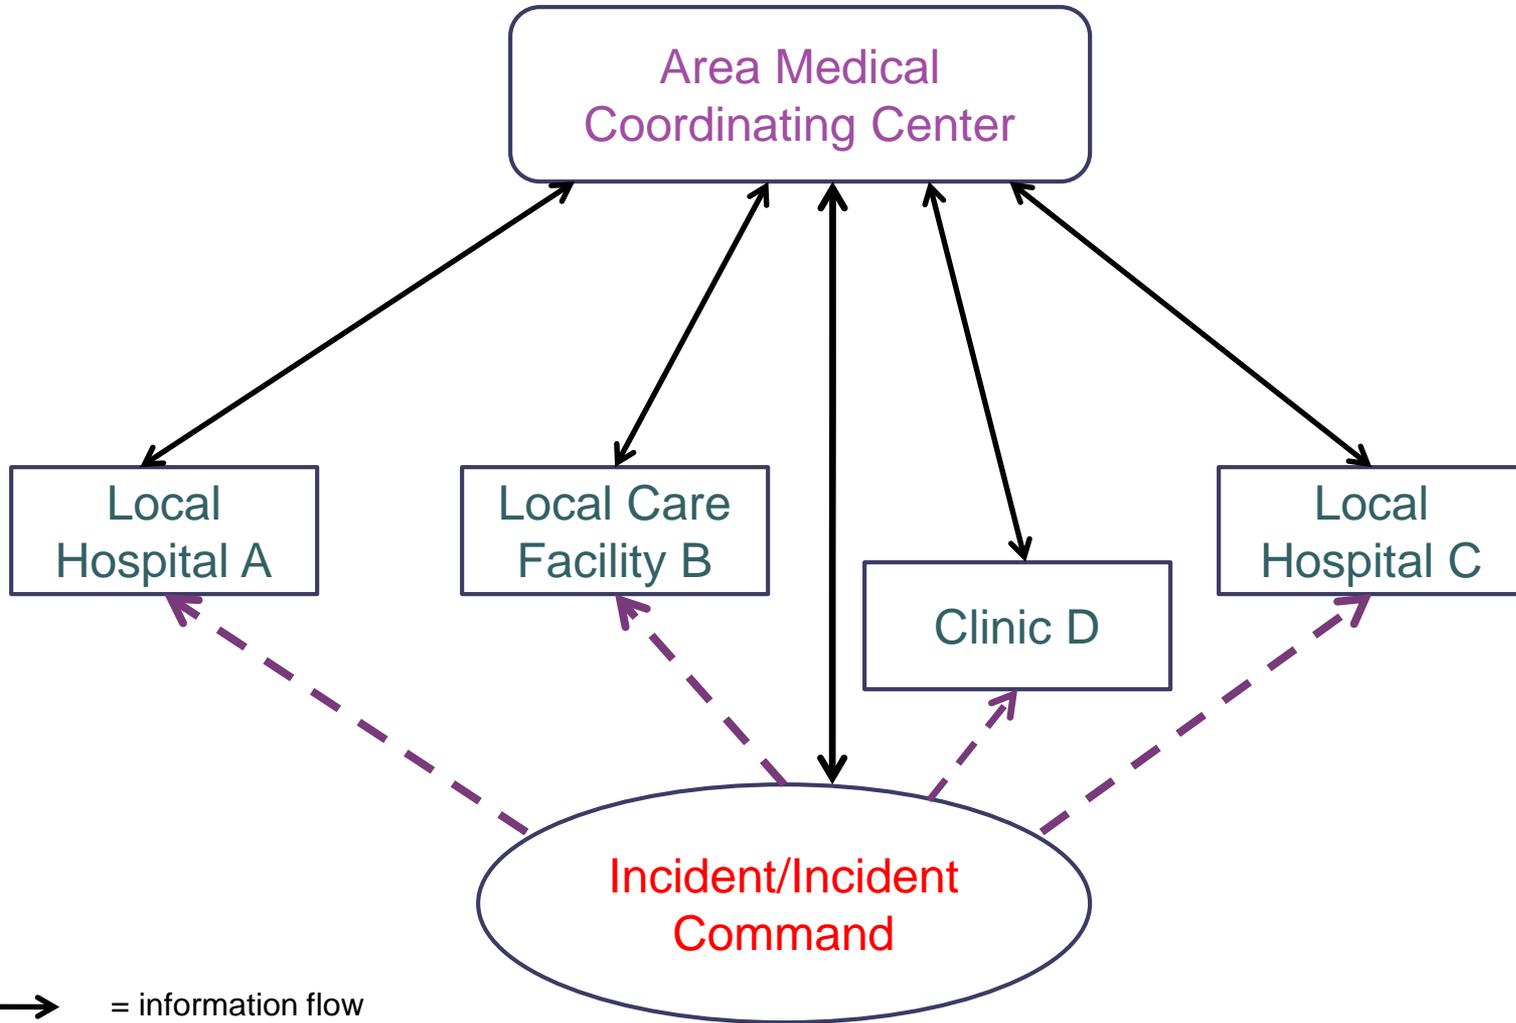

# Tier 1

↔ = information flow

← - - - = patient flow (EMS/transportation)

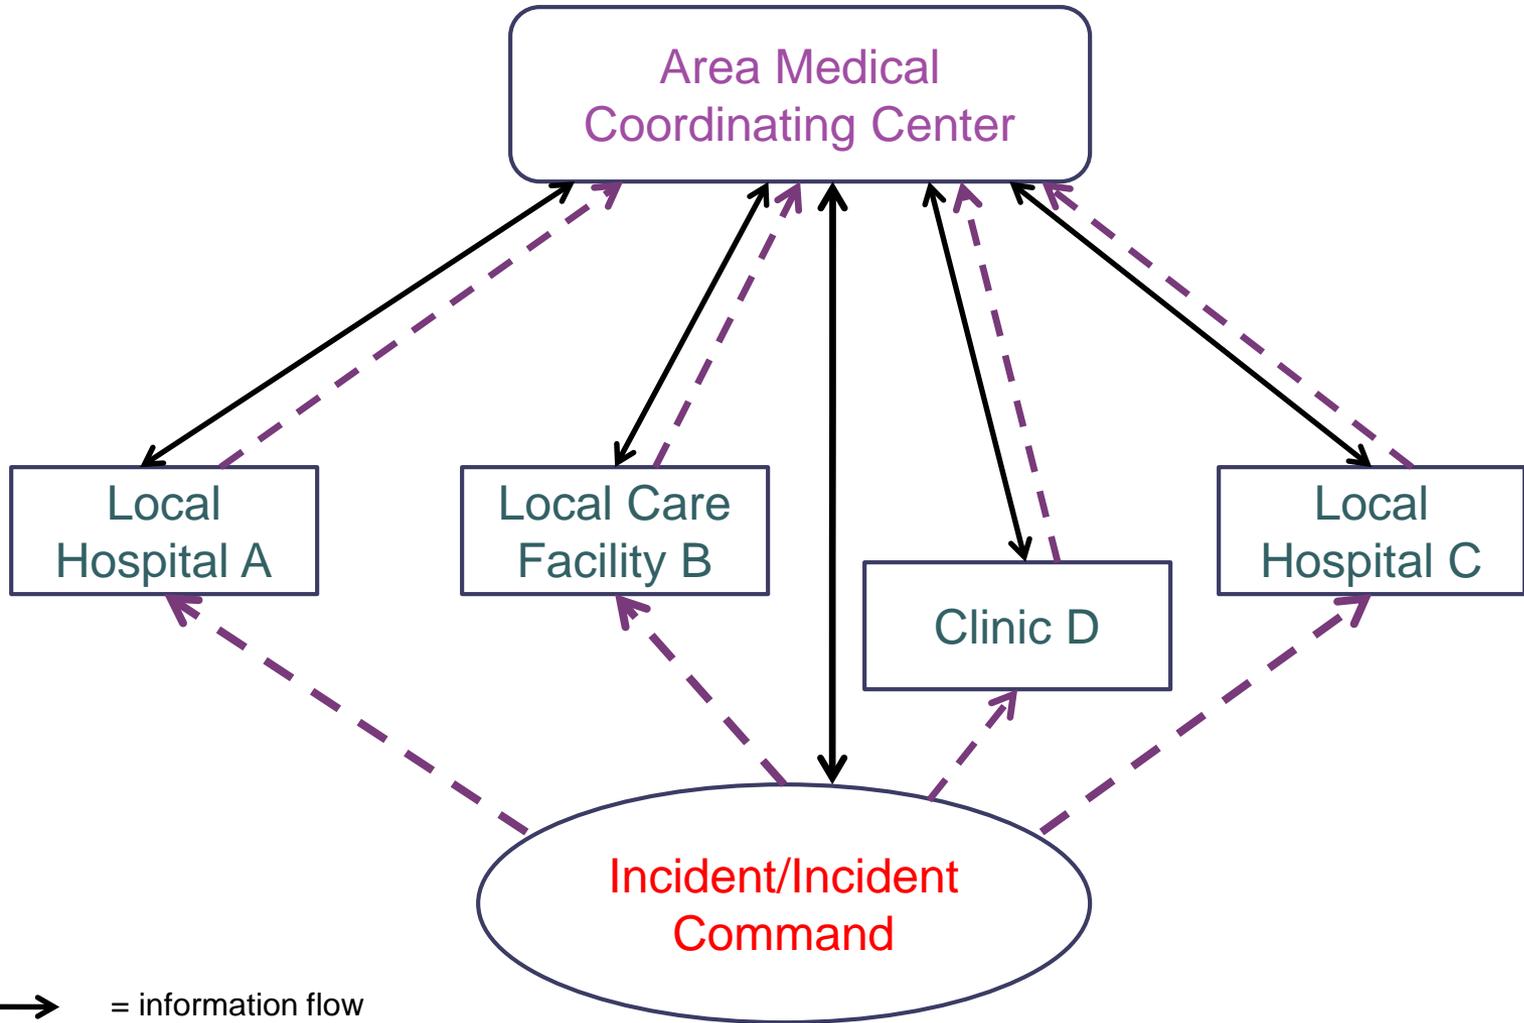

# Tier 2

↔ = information flow

← - - - = patient flow (EMS/transportation)

# Tier Resource Document

REV 3.26.2014

## Wisconsin Preparedness Healthcare Coalition Coordination Tier Resource Document

March 26, 2014

The purpose of this document is to provide additional explanation of the tiered framework for healthcare response to disasters and special events. The information provided is intended to assist in the adaptation and tailoring of the tiered framework for localities and regions. Key principles and assumptions essential for effective coordination are highlighted.

### Definitions:

(see also United States Department of Health and Human Services, Office of the Secretary for Preparedness and Response, or HHS/ASPR, Medical Surge Capacity Handbook <http://www.phe.gov/Preparedness/planning/mscc/handbook/Pages/default.aspx>)

**Local healthcare organization (HCO, or "healthcare organization," "healthcare entity")** – A single entity providing medical services, this may include (but is not limited to) a hospital, integrated healthcare system, emergency medical services (EMS) agency, physician office, outpatient clinic, nursing home or other skilled nursing facility.

**Healthcare coalition (HCC, or "coalition")** – A multi-disciplinary, multi-organization partnership that organizes individual healthcare assets/organizations into a single functional unit in order to maximize cooperative planning, information sharing, and management coordination. A coalition may include hospitals, public health agencies, long-term care or alternative treatment facilities, dialysis and other outpatient treatment centers, nursing homes and other skilled nursing facilities, private physician offices, clinics, community health centers and any other healthcare asset. Coalitions may also include emergency response and public safety agencies, emergency management, community and volunteer organizations, educational institutions, and any other organization that may provide resources to care for patients during an event.

**Health Emergency Region (or "region")** – A geographic region with borders defined by the Wisconsin Department of Health Services for the purposes of medical planning and response coordination in large-scale emergencies.

**Area Medical Coordinating Center (AMCC)** – A healthcare or healthcare-related entity (such as public safety answering or dispatch center, transfer/access center, etc.) in the geographic area of an incident, with the ability to support the healthcare coalition with coordination of information and patient movement. The AMCC should be designated through planned criteria or schedule. Depending on the area and situation, an AMCC may be the initial healthcare organization impacted by an incident and/or may also be the Regional Medical Coordinating Center (see below). For example, the closest trauma center to a mass casualty incident may serve as the AMCC.

# Disaster Planning and Response –

## Where Do HCCs and Organizations Fit In?

# HCC Purpose

- Coordinate how public health, healthcare institutions, and first responder agencies will manage their efforts to enact a uniform and unified response to an emergency, specifically the medical surge aspect of an event (ESF-8)
- Shift from planning to include response and recovery
- **Does not replace day-to-day functioning of individual disciplines**

# ESF-8 Areas by Essential PH Services

- **Assessment**
  - **Monitor** health status to identify community health problems
    - Assessment of Public Health/Medical Needs
    - Health Surveillance
    - Agriculture safety and security
    - Behavioral healthcare
    - Food safety and defense
  - **Diagnose and Investigate** health problems and health hazards in the community.
    - Health Surveillance
    - Medical Surge
    - All-hazards public health and medical consultation
    - Behavioral healthcare
    - Vector control
    - Mass fatality management

# ESF-8 Areas by Essential PH Services (cont.)

- **Policy Development**
  - **Inform, Educate, and Empower** people about health issues.
    - Safety and security of drugs, biologics, and medical devices
    - Blood and tissues
    - Food safety and defense
    - Agriculture safety and security
    - All-hazards public health and medical consultation
    - Behavioral healthcare
    - Public health and medical information
    - Vector control
    - Guidance on potable water/wastewater and solid waste disposal
  - **Mobilize** community partnerships to identify and solve health problems.
    - **ALL CORE FUNCTIONAL AREAS**
  - **Develop policies and plans** that support individual and community health efforts.
    - **ALL CORE FUNCTIONAL AREAS**

# ESF-8 Areas by Essential PH Services (cont.)

- **Assurance**

- **Enforce** laws and regulations that protect and ensure public health and safety
  - Medical Surge
  - Patient Care
  - Safety and security of drugs, biologics and medical devices
  - Blood and tissues
  - Food safety and defense
  - Agriculture safety and security
  - Vector control
  - Guidance on potable water/wastewater and solid waste disposal
  - Mass fatality management, and decontaminating remains

# ESF-8 Areas by Essential PH Services (cont.)

- **Link** people to needed personal health services and assure the provision of health care when otherwise unavailable.
  - Assessment of public health/medical needs
  - Health surveillance
  - Medical surge
  - Health/medical/veterinary equipment and supplies
  - Patient movement
  - Patient care
  - All-hazards public health and medical consultation, technical assistance, and support
  - Behavioral healthcare
  - Public health and medical information

# ESF-8 Areas by Essential PH Services (cont.)

- **Assure** a competent public and personal health care workforce.
  - All-hazards public health and medical consultation, technical assistance, and support
- **Evaluate** Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services.
  - Assessment of public health/medical needs
- **Research** for New Insights and Innovative Solutions to Health Problems
  - ALL

## ESF-8: Shared Healthcare and Public Health Core Areas

- Assessment of public health/medical needs
- Health surveillance
- Medical surge
- Health/medical/veterinary equipment and supplies
- Patient movement
- Patient care
- Safety and security of drugs, biologics, and medical devices
- Blood and tissues

## Shared Core Areas (continued)

- All-hazards public health and medical consultation, technical assistance, and support
- Behavioral healthcare
- Public health and medical information
- Mass fatality management, victim identification, and decontaminating remains

# How does HCC participation benefit an organization/agency?

- Gateway to all partners involved in a healthcare emergency/special incident
  - Able to reach all coalition partners more efficiently
    - “One stop shop” off-loads burden of a single organization having to contact each partner by itself
  - Receiving organization(s) able to off-load patients/workload in order to receive additional patients or emergent tasks
  - Allows scene Incident Command to have information to better coordinate patient distribution/transport and incident tasking
  - Healthcare sector able to collectively work with government and private partners

# How does HCC participation benefit an organization/agency? (cont.)

- **Streamlined information flow**
  - **Surveillance/intelligence and situational awareness**
    - Allows for collective awareness by pooling all of coalition's information/sources
    - Offloads burden of collecting/sorting information from single organization
    - Reduces "information overload"
    - Ensures relevance/utility for organization
  - **Public and media information**
    - Pool coalition's resources to assist in development and dissemination of materials
    - Promotes uniform message across region to reduce confusion/conflicting information

# How does HCC participation benefit an organization/agency? (cont.)

- **Provides enhanced response and treatment resources**
  - Receive and disseminate information and translate into actions
  - Ability to reach multi-disciplinary healthcare providers across region
  - Coordinated distribution of patients to reduce chance of disproportionate surges on any single organization
  - Easier access to knowledge resources – regional and state experts, etc.
  - Easier access to physical resources – bed space, equipment, supplies, medications, etc.

# How does HCC participation benefit an organization/agency? (cont.)

- HCC enhances ability to meet regulatory requirements
  - Joint Commission rules
  - CMS regulations
  - ASPR/CDC grant requirements
  - DHS/FEMA grant requirements
  - Provide tools/templates, content experts, other resources to assess and meet compliance
  - Current emphasis on collective preparation and community resilience

# How does Public Health agency participation benefit the HCC?

- Provide population health and safety perspective
  - Versed in prevention strategies
  - Epidemiologic training and tools
  - Core knowledge of public health threats
- Incident response
  - Legal authority of surveillance, investigation, enforcement, and declarations of emergency
  - Linked into governmental structure
  - Established systems
    - Epidemiologic surveillance
    - Public communication and education/outreach
  - Special resource access (stockpiles, etc)

# How can administration/leadership help?

- **Support internal and external emergency planning**
  - Strengthening partnerships with other healthcare, public health, and public safety organizations/agencies
  - Institutional approval/support of staff to work on plans
  - Participation in exercises
  - Encouraging familiarity with preparedness and Incident Command System at all levels of organization
  - Mobilization of organizational resources (both for planning and in an actual event)

# How can administration/leadership help?

- **Support Healthcare Coalition development**
  - Support of multi-disciplinary, multi-organizational coalition concept and development
    - Organization/agency/system participation
    - Outreach to partners
  - Provide administrative/business expertise to coalitions
  - Support of information and resource sharing
    - Situational awareness
    - Current capacity/capabilities
    - Resources available

# Next Steps – Continuing Development

- Identification of partners needed to develop the healthcare coalition
- WHEPP guidance document on development of governance structure of regions/healthcare coalitions
- How would the health care organizations in your area/region respond to incidents such as:
  - A commercial plane crash?
  - A collapse of the grandstands at the county fair?
  - An outbreak of highly contagious disease at the local school?
  - A chemical tanker spill in a high-traffic area?

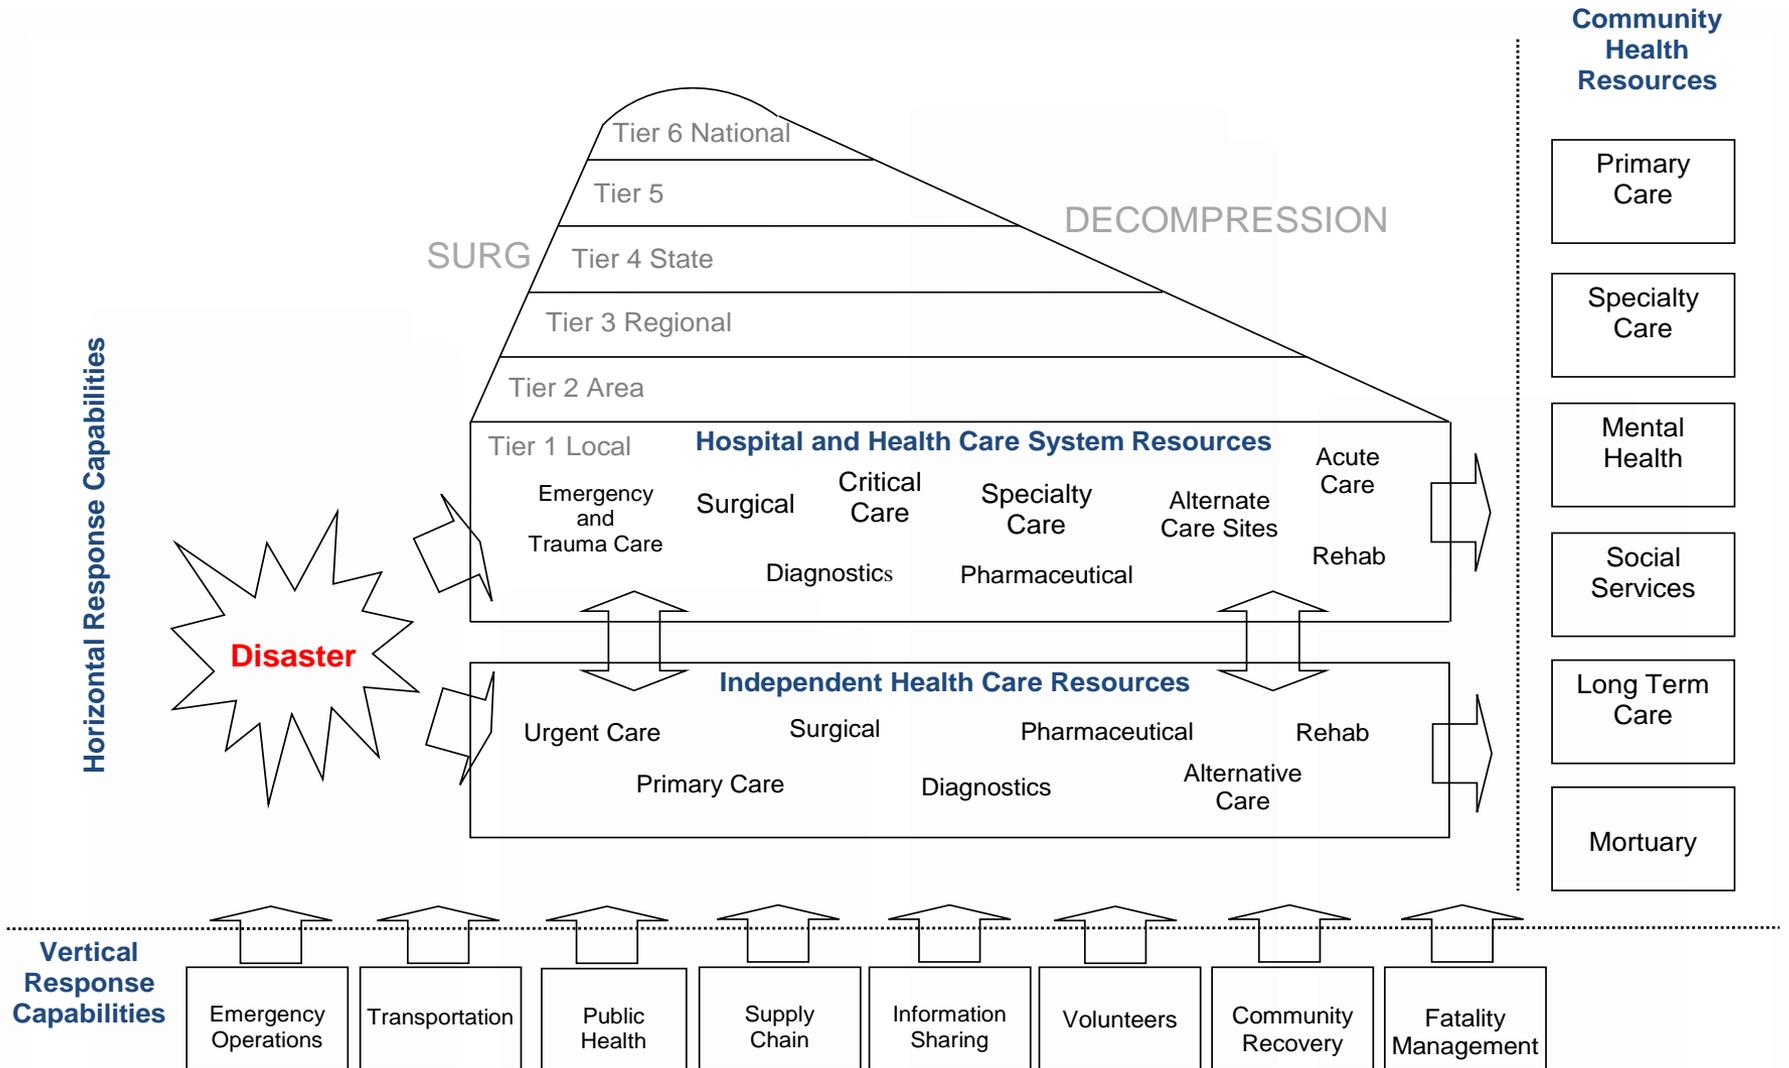

# The Vision

- The vision of the tier framework and healthcare emergency coalitions is to provide...
  - Rapid activation and coordinated approach to managing patients from large-scale or unusual incidents
  - Increased collaboration between health care, emergency response, and public service sectors
  - Increased communication interoperability between all participants in the greater Healthcare Coalition
  - Seamless integration with the national/federal system
- ...so that our state will be able to provide the best medicine in the worst of times!

# Appendix

## Ebola Preparedness: An Example of the Healthcare Coalition Concept

# DISASTER HEALTHCARE RESPONSE – A COALITION MODEL

# The Ebola Apocalypse?

## ZOMBIE APOCALYPSE

WHAT WE THINK IT LOOKS LIKE:

WHAT IT REALLY LOOKS LIKE:

## ZOMBIE APOCALYPSE SURVIVAL RULES

- #1 Cardio.
- #2 The double tap.
- #3 Beware of bathrooms.
- #4 Seatbelts.
- #5 No attachments.
- #6 The skillet.
- #7 Travel light.
- #8 Get a kickass partner.
- #9 Blend in.
- #10 Aim for the head.
- #11 Keep hope alive.
- #12 Bounty paper towels.
- #13 Know your surroundings.
- #14 Learn to improve.
- #15 Bowling ball.
- #16 Always carry a change of underwear.
- #17 Don't be a hero.
- #18 Limber up.
- #19 Double-knot your shoelaces.
- #20 The ziploc bag.
- #21 Avoid strip clubs.
- #22 When in doubt, know Your Way Out.
- #23 Don't name zombies.
- #24 Keep calm.
- #25 A little sunscreen never hurt anybody.
- #26 Hand sanitizer.
- #27 Be sensible with supplies.
- #28 Pack your stain stick.
- #29 The buddy system.
- #30 It's a marathon, not a sprint.  
Unless it is a sprint, then sprint.
- #31 Check the back seat.
- #32 Enjoy the little things.
- #33 Swiss army knife.

How could functional healthcare emergency preparedness coalitions help us in this current situation?

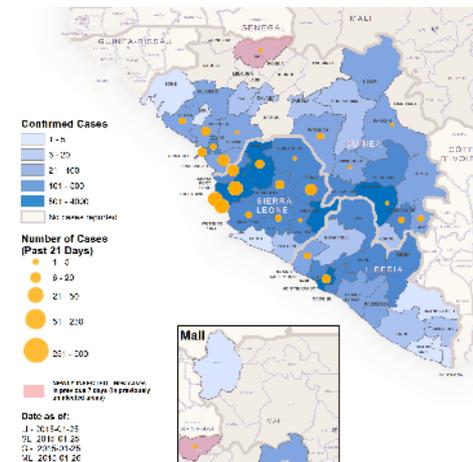

# Ebola Preparedness and Coalitions

- Involvement of many organizations/disciplines
  - Public health
  - Hospitals, clinics, and healthcare facilities
  - EMS and Emergency Responders
  - 911 call/dispatch centers
  - Law enforcement
  - Emergency Management
  - And many others!
- Involvement of many levels
  - Private – Single location/facility vs. System
  - Local
  - State
  - National/Federal

# Detection and Screening

- Situational awareness requires up-to-date, accurate information from numerous sources
- Consistent screening criteria to reduce confusion and/or panic
- Ability to quickly disseminate information among all partners

# Detection and Screening – What Our Coalition Could Provide

- Regular medical intelligence reports
  - Collect and sort information from numerous sources
  - Provide analysis and summarize into “digestible” form
  - Allows for better informed decisions
- Make technical expertise from around the region available to all
  - Advise screening policies and procedures
  - Interpret clinical presentation (“Is this real or not?”)
  - Assist in education and outreach to staff and public
- Common forum/network for communication and dissemination
  - Easier to monitor
  - Easier for partners to push out information (“one-stop shop”)

# Patient Referral/Transport

- Organized plan for safe, effective movement of patient to a healthcare facility for evaluation and care
- Linking the organizations/agencies involved
  - Ensure situational awareness
  - Ensure appropriate procedures activated
  - Smooth hand-offs/transitions

# Patient Referral/Transport – What Our Coalition Could Provide

- Common forum/network to
  - Discuss designation of appropriate agencies and facilities
  - Ensure plans are operationally compatible between agencies/organizations
  - Disseminate information
- Make resources from around the region available
  - Technical expertise
  - Personnel
  - Equipment/vehicles

# Patient Evaluation and Management

- Efficient use of resources to manage the patient as well as personnel
- Cross-disciplinary collaboration
  - Clinical providers and experts
  - Infection control
  - Supply chain
  - Environmental services
  - Public health and epidemiology
  - Media relations

# Patient Evaluation and Management – What Our Coalition Could Provide

- Share resources and expertise
- Coordinate respective roles/responsibilities
- Ensure flow of necessary information to all partners
- Manage messaging to public

# The Aftermath

- **Coalition collaboration to assist in**
  - Continued patient and contact monitoring
  - Clean-up and disposal
  - Continued public messaging and education
- **Post-event assessment and improvement**
  - Comprehensive analysis of strengths and weaknesses
  - Production of an integrated plan for future events

# In Summary

- “Never let a good disaster go to waste.”
  - This is not just about ebola!
  - Utilize knowledge gained and progress made
- Opportunity to foster collaboration and coordination
  - New contacts and agreements
  - Development of regional healthcare preparedness coalition
